

Jefo's blend of purified single enzymes

Exogenous feed enzymes are a precision nutrition solution that improves digestibility & gut health

Feed costs account for almost 70% of livestock production costs. Improvement in gut health helps to minimize this investment cost and optimize performance. The solution is the **Jefo Purified Single Enzymes Blend**

Amino Acid uplift

- 3 enzyme activities
- Reduces N emission
- Improves gut health

Energy uplift

- Effective on all types of AX
- Unique bacterial origin
- Natural production of prebiotics

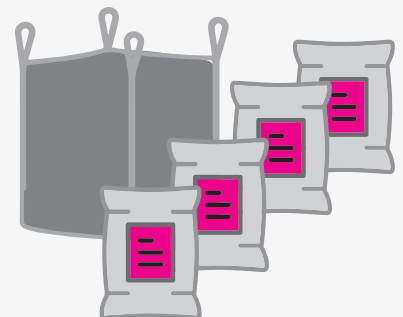

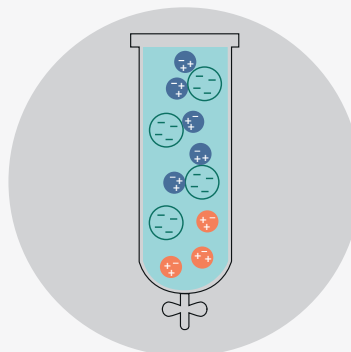

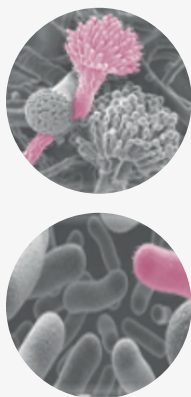

Quality consistency

Consistent quality by unique fermentation process

Fermentation

Purification

Standardization

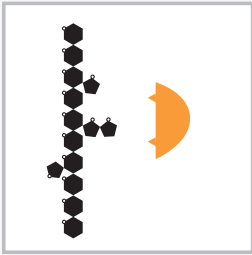

*Ion exchange chromatography

*Ion exchange chromatography- This technique enables the separation of similar types of molecules that would be difficult to separate by other techniques.

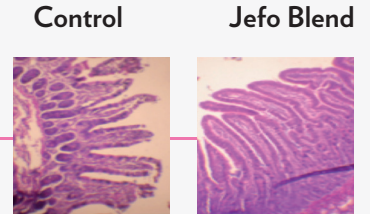

Jefo (xylanase + protease + β -mannanase):

Breaks Down Larger Carbohydrate & Protein Chains Into Smaller Fragments
To Improve Digestibility And Gut Health.
